BUILD THE PROJECT PLAN THAT RUNS ITSELF: THE PLAYBOOK THAT 3X'D MY PROJECT THROUGHPUT

RACHEL WOODS

Founder & CEO

AI Momentum Protocols (AMP)

One week, I got very sick...

What still got done that week...

- Inbox handled
- Meetings rescheduled
- Sales follow ups sent
- Proposal edits generated, PDF'd and sent
- Closed $2500 of new business
- Kicked off planning for a new partnership
- Created a performance report from our last webinar
- Built a new offer checkout page

8+ hours of real work.
From bed.

That's because my team doesn't just use AI

We decide. *AI executes.*

Rachel Woods

Former life:

- Former Facebook AI research data scientist
- Former VC-backed startup founder

Now:

- Personally AI Operator'd at 39 businesses in 1 year
- CEO of AMP — **we teach people to become AI Operators**
- Followed by 250,000+ across TikTok, LinkedIn, Instagram and YouTube
- Trained 2,000+ professionals on AI operations

"I haven't met a process I couldn't playbook"

— Rachel

AS SEEN IN LinkedIn Learning Forbes Fortune Tony Robbins Dean Graziosi Bessemer Venture Partners Social Media Examiner

Today, I have a team of 10 people.

- Zero people doing my sales outreach.
- Zero people managing my inbox or scheduling meetings.
- Zero people reporting on our marketing campaigns.
- Zero people writing our project plans.
- Zero people doing lots of stuff...

WE USE AI PLAYBOOKS TO...

Do 3x More Projects

Project Planning Playbook

TRIGGER

Ready to plan a new project

INPUTS

- Project Description

STEPS

1. Clarify the Project
2. Brainstorm Approaches
3. Timeline + Tasks
4. Draft Project Plan
5. Start AI Tasks

OUTPUTS

- Complete project plan with tasks, owners & due dates

Let's see if you ACTUALLY need this...

Stand up if...

Stand up if you...

Have a project on your plate right now that's *already behind.*

Stand up if you...

Have explained the same thing to the same person *more than once.*

Stand up if you...

Have ever tried to delegate, only to think... nevermind, it's faster if I just *do it myself.*

Look around the room.

That's *Operational Debt.* And every single one of us has suffered.

...There has to be a better way

The technique I want to teach you today:

Playbooking.

The mindset

Think about how you'd *teach a human.*

Imagine you hired a project manager...

What would make them great?

- They had context on you and your work.
- They knew how you want things done.
- They knew how to handle edge cases and escalations.
- You'd give them a handbook — and that's when you'd start trusting them.

Playbooking is giving AI that employee handbook.

The 4 *Components*

Trigger

What kicks it off.

Inputs

What AI needs from you each time.

Steps

Your actual process, broken down into tasks.

Outputs

The end result.

The 4 *Components*

Let's build together.

Grab the *template* before we start

Everything you need to build along is on this page

What's there –

1. The Project Planning Playbook template (make a copy)
2. The runner instructions to paste into Claude or ChatGPT
3. Bring your real project — the one you need to ship in 90 days

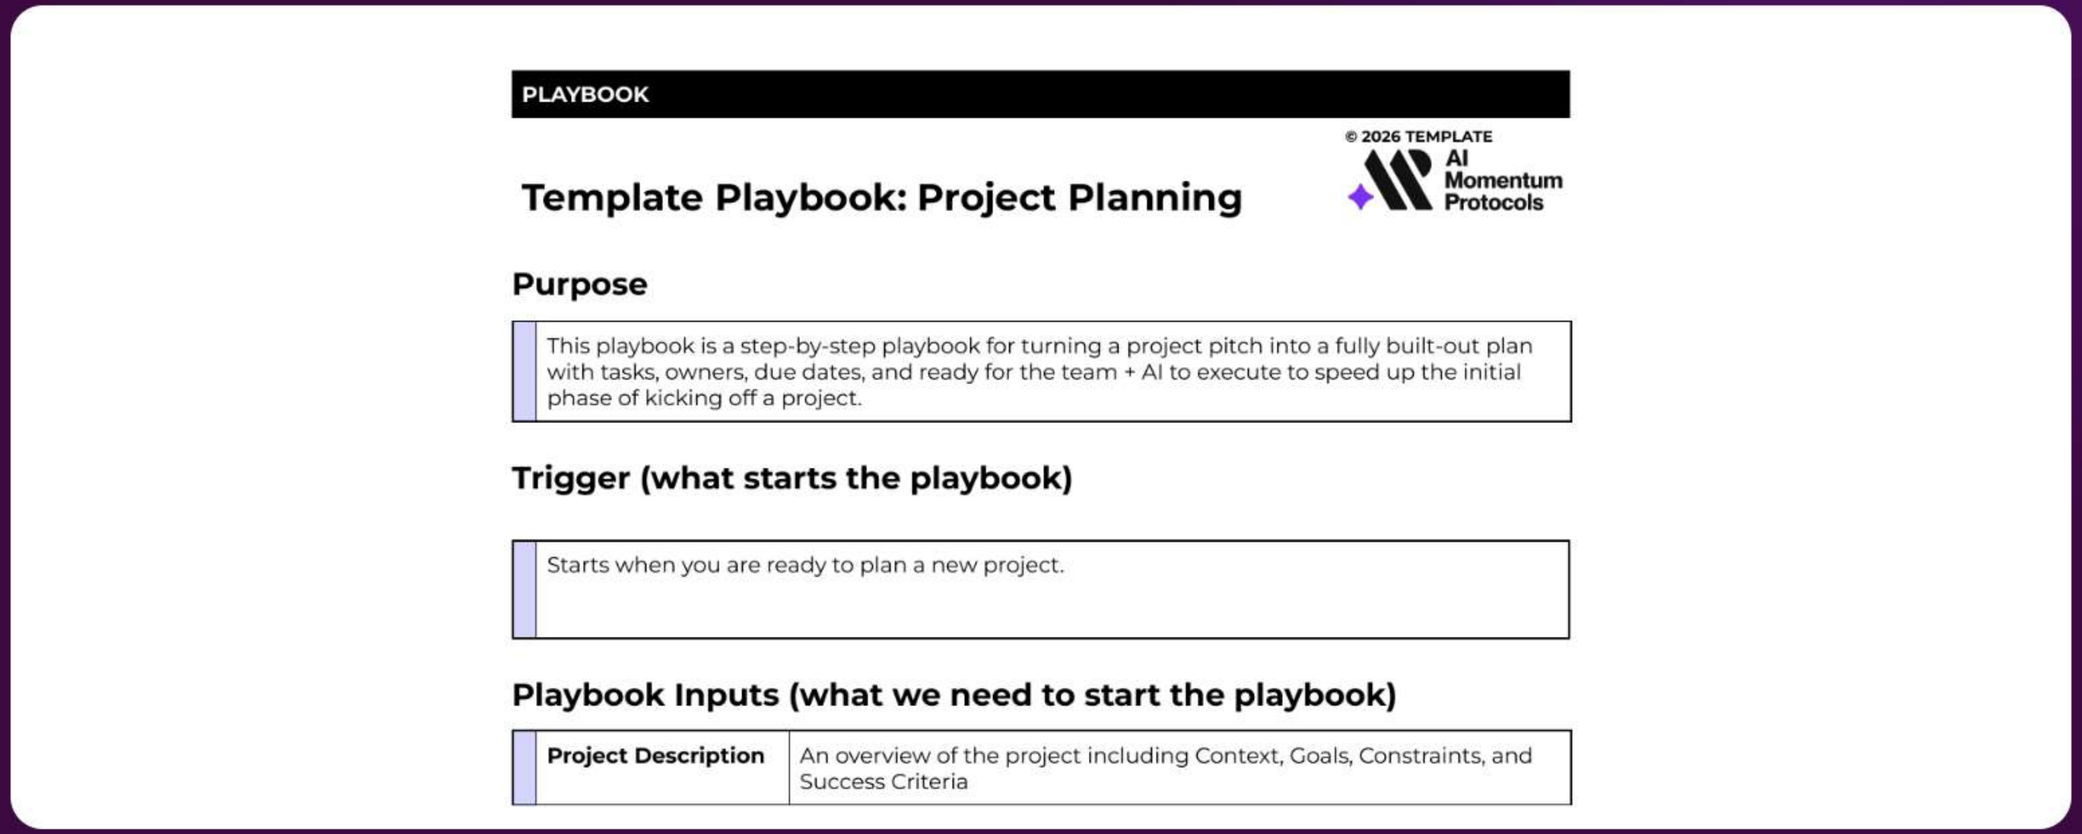

resources.runonamp.com/maicon

One playbook. Then run it on your real project.

Today's playbook: *Project Planning.*

Make a copy. Yellow = yours to customize.

PLAYBOOK

© 2026 TEMPLATE AI Momentum Protocols

Template Playbook: Project Planning

Purpose

This playbook is a step-by-step playbook for turning a project pitch into a fully built-out plan with tasks, owners, due dates, and ready for the team + AI to execute to speed up the initial phase of kicking off a project.

Trigger (what starts the playbook)

Starts when you are ready to plan a new project.

Playbook Inputs (what we need to start the playbook)

Project Description	An overview of the project including Context, Goals, Constraints, and Success Criteria

resources.runonamp.com/maicon

It's a rhythm, not a checklist

C is for

Clear Picture

The rule

Before AI does it, decide *exactly how you'd do it.*

The playbook outline — 5 steps

1

Ask questions to clarify the project

Surface the gaps. Max 2 rounds. Confirm before planning.

2

Brainstorm approaches, recommend one

3 real options, one recommendation, you decide.

3

Clarify timeline + tasks

Deadline, milestones, who's involved — and the task types you never skip.

4

Draft the project plan

Every task: due date, owner, executed by (AI does / AI drafts / human does), details.

5

Offer to start on AI tasks

Lists what AI can begin right now. You say go.

SHOUT IT OUT

What is in a great project plan?

Yellow #1 — Step 1 · Success Criteria

- Goal is a problem to solve, not a vague direction
- Constraints include appetite (time / effort) and resources
- Success criteria are observable and measurable
- + what the room just said

This is what the AI checks for before it lets you plan.

SHOUT IT OUT

What types of tasks do you want to make sure are always included?

Yellow #2 — Step 3 · Task Planning Guide

- Feedback Loop — a designated stage for stakeholder feedback
- Team Rollout — training, communication, long-term continuity
- Handoff — sharing information and responsibility out of the project
- + the task types your projects always need

AI will ask about every one of these, every project. Nothing structural gets missed.

Yellow #3 — the shape of the plan

Response Format	Project Name: Due Date: Owner: # Context [Background information. What is happening, what prompted this project, what does someone need to know to understand why this work matters.] # Goal [The specific problem this project solves. One or two sentences. Should be concrete enough that someone can tell when it's been achieved.] # Constraints [Appetite (how much time/effort is acceptable), resources (who is available, what budget exists), and any hard limits on scope.] # Success Criteria [Observable, measurable outcomes. How will we know this project succeeded?] --- # Planned Approach [Description of the chosen approach. What it is, what it prioritizes, and what it trades off. Should be specific enough that someone could use it to make task-level decisions.] --- # Project Timeline and Tasks

Context · Goal · Constraints · Success Criteria — make it match how your team already writes plans

YOUR TURN · 4 MIN

Fill in the yellow.

Three sections. Use what the room said, then add what only you know.

R is for

Realistic Design

The rule for version 1

Usable & useful — but *no bigger.*

Scoping version 1

DON'T

- ✗ Connected to your task manager (v2)
- ✗ Creates the tasks in ClickUp / Asana for you (v2)
- ✗ AI agents running tasks on their own (v3)

DO

- ✓ Runs in a chat: Claude or ChatGPT
- ✓ Outputs the plan as a doc you can paste anywhere
- ✓ Step 5 offers to start AI tasks in the same chat

Any AI that can follow instructions, can follow a playbook

LEVEL 1

AI Chatbots

LEVEL 2

AI Agents

LEVEL 3

Systems of Agents

Confirm the tool can do every step — before you write the step.

- Today: we tested it for you. Claude and ChatGPT run all 5 steps out of the box.
- Want Step 4 to create tasks in ClickUp or Asana? Connect it — and create ONE test task first.
- Want Step 5 to actually run the AI tasks? Check the tool has access to what those tasks need.
- Any step the tool can't do yet → make it a human step. Don't delete it.

Realistic design is the difference between a playbook that runs and one that's 'almost working'.

A is for

AI-ify

The rule

Configure it. Test it. *Make sure it works.*

2. Brainstorm Approaches
3. Timeline + Tasks
4. Draft Project Plan
5. Start AI Tasks

OUTPUTS

- Complete project plan with tasks, owners & due dates

claude.ai

run my **/project-planning playbook**

Loaded project-planning skill

STEP 0 — Inputs

Give me an overview of the project: context, goal, constraints, success criteria. Messy is fine.

Q4 webinar on AI for marketing ops. Goal: 500 registrations, 20 sales calls booked. Need landing page, 4 emails, 6 social posts, the deck, follow-up. Team is me + 1 designer. Live in 3 weeks.

2. Brainstorm Approaches
3. Timeline + Tasks
4. Draft Project Plan
5. Start AI Tasks

OUTPUTS

- Complete project plan with tasks, owners & due dates

claude.ai

designer. Live in 3 weeks.

FOLLOWING STEP 1 — Clarify the Project

Two gaps before I plan:

1. **Appetite** — 3 weeks is the deadline. How many hours of *your* time is this worth?
2. **Success criteria** — 500 regs and 20 calls are outcomes. What's the measure you control — emails sent on schedule? Page live by day 5?

Everything else is clear.

15 hours of my time, max. Page live by day 5, all 4 emails out on schedule.

Reply to Claude...

4. Draft Project Plan
5. Start AI Tasks

OUTPUTS

- Complete project plan with tasks, owners & due dates

claude.ai

15 hours of my time, max. Page live by day 5, all 4 emails out on schedule.

FOLLOWING STEP 2 — Brainstorm Approaches

A. Full funnel — page, 4 emails, 6 posts *(fits: ~14 hrs of you)*
B. Partner co-host for reach *(over appetite — adds a week of coordination)*
C. Repurpose last deck, 2 emails *(fits, but risks the 500)*

I'd recommend A — it hits the goal inside 15 hours because AI drafts every piece of copy. Which would you like to go with?

A.

claude.ai

A.

FOLLOWING STEP 3 — Clarify Timeline + Tasks

Checking the task planning guide:

- **Feedback loop** — who reviews copy before it ships? You, or the designer too?
- **Team rollout** — anyone else running follow-up after the webinar?
- **Handoff** — do booked calls go to a sales rep?

And: any hard dates besides the webinar itself?

I review all copy. Follow-up is me. Calls go to Sam. Webinar is Nov 12.

🚫 No prompting each time.

🤝 No fighting with the AI.

✅ You can actually trust it.

F is for

Feedback

The rule

Don't wait for AI to improve itself. *Optimize your instructions.*

The AI Operator's Feedback Loop

1

Use the playbook

On real work, not test prompts.

2

Track feedback

A running log: what was off, which step.

3

Triage it

Major, or annoying-but-fine?

4

Fix it — or backlog it

Major → fix the instructions now. Minor → backlog, batch later.

↺

Run it again

Every loop, it gets more yours.

Fix the playbook, not the output.

- It asked too many questions → put the answers in the step's context
- It labeled a task wrong → sharpen the execution designations in Step 4
- The plan came out in the wrong shape → edit the response format (yellow #3)
- It skipped a task type → add it to the task planning guide (yellow #2)

Every fix goes in the doc. Then it never happens again.

YOUR TURN · 2 MIN

Start your feedback log.

Look at what it produced. Write down one thing that was off — and which section of the playbook you'd change.

T is for

Team Rollout

Rollout is part of the design

01 **Identify who**

Who needs to be trained on it? Start with you. Then whoever plans projects next.

02 **Habit stack**

Bookmark it in your project tool. Make 'run the playbook' the first step of every kickoff.

03 **Ongoing feedback**

A shared feedback log. One owner who folds fixes back into the doc.

What rollout looks like

Marketing team

Every campaign brief triggers the playbook.

Agency / client work

Account managers run it on every new client project.

Ops / PMO

Plan gets pasted into ClickUp.

Solo

Monday ritual: run it on whatever's new.

YOUR TURN · 1 MIN

Who else runs this?

One name for who, one place it lives, one person who owns the feedback log.

How could you expand this playbook?

- Output multiple versions of the plan — one per stakeholder
- Pull metrics or last project's retro in as an input
- Connect it to your task manager so Step 4 creates the tasks
- Add a Step 6: draft the kickoff message to the team
- Improve the instructions and share it with your team

Same playbook. Version 2, 3, 4...

RECAP — YOU JUST WROTE A PLAYBOOK

CRAFT

C **Clear Picture**

Put your expertise in the yellow

R **Realistic Design**

Scoped v1. Picked the tool.

A **AI-ify**

Saved it. Ran it on your real project.

F **Feedback**

Started the log. Know what to fix.

T **Team Rollout**

Named who runs it and where it lives

And what you're walking out with

- A pitch that locks appetite before scope creep eats it
- A full task breakdown — AI does, AI drafts / you review, or you do
- Task details an agent can actually execute
- The reusable playbook — next project takes an hour instead of a day

Here's the real trick

CRAFTing yourself *out of the loop.*

Every project, the plan gets better. And you do less of it.

- Project 1: you write the pitch, AI breaks it down, you spec 3 tasks
- Project 2: the breakdown is a playbook. AI-drafts the specs. You approve.
- Project 3: AI drafts the whole plan from the pitch. You edit for an hour.
- Project 4: you write the pitch. That's it.

This is how it went from a day to an hour. And from 1 project at a time to 3.

This is how you get operations that scale themselves

LEVEL 1

💬

AI Chatbots

You run the playbook

LEVEL 2

🤖

AI Agents

Agents run the playbook

LEVEL 3

⚙️

Systems of Agents

Agents improve the playbook

And that's not all.

You can stack playbooks into a *system*.

Rachel's Personal Operating System

1 - MORNING ROUTINE (5)

`todaying`
Daily rhythm — morning kickoff, mid-day check-in, evening wrap.

`executing-sales-tasks`
Draft follow-up emails from HubSpot tasks and mark them complete.

`checking-decisions`
Triage pending decisions using 1-3-1 logic.

`scheduling-meetings`
Find ideal time slots, check availability, and place calendar holds.

`prepping-meetings`
Research attendees and prepare context for today's meetings.

2 - STRATEGY (6)

`creating-game-plan`
Map out the next few weeks — calendar, tasks, and team priorities.

`updating-strategy`
Process new information and update strategy documents.

`mapping-momentum`
Run a Momentum Mapping™ session to turn ambiguity into a confident next cycle.

`cleaning-tasks`
Review overdue and stale tasks, update statuses, and resolve backlogs.

`cleaning-calendar`
Categorize events, flag conflicts, and resolve scheduling issues.

`choosing-opportunity`
Choose the highest-impact work when capacity opens up.

3 - PROJECTS (3)

`pitching-project`
Develop a clear project pitch before committing to execution.

`planning-project`
Turn an approved pitch into a detailed project plan.

`pitching-from-slack`
Turn a Slack discussion into a tracked project pitch.

4 - IDEAS & TASKS (4)

`capturing-ideas`
Quick idea capture with follow-up questions, saved for later review.

`triaging-ideas`
Review captured ideas — clarify, organize, and decide next actions.

`capturing-tasks`
Quick task capture — clarify and add to ClickUp inbox.

`triaging-tasks`
Process ClickUp inbox — prioritize, assign, and route tasks.

5 - LIFE (2)

`grounding-mindset`
Personal mindset coaching aligned with Rachel's identity and values.

`capturing-life-homework`
Capture today's story-worthy moment — the five-second shift.

That's how 8 hours of work happened *while I was in bed.*

Playbooking is not a one-off project. It's *a new capability.*

Everyone needs to learn to put their *AI operator hat* on.

"Businesses based on *AI heroics* never scale."

The future is here. It's not just about using AI. *It's operating with it.*

Remember, you can *playbook that.*
