"Ceiling fans and portable fans are energy-efficient alternatives to air conditioning producing just 1% of the energy that an A/C does," suggested Brandon Young, CEO of Texas affordable power company Payless Power. "Set your ceiling fan to run counterclockwise in the summer to create a cooling breeze and position portable fans near windows to draw in cooler air from outside."

According to Brandon Young, CEO of Payless Power, the very worst thing you can do to your AC is crank down the temperature to the lowest setting, thinking it will cool your home down faster. "In reality, your air conditioning unit cools at a constant rate regardless of what temperature you're using," he explains. "All you're doing is creating additional pressure on the system, which can drive up your energy bill without your house feeling any more comfortable any quicker."

MEET THE EXPERT

- **Brandon Young**, CEO of Payless Power

Fractl launched an expert commentary strategy for Payless Power to build authority around electricity costs, energy usage, and the issues affecting consumers' power bills.

Why Payless Power

As an electricity provider, Payless Power has firsthand insight into energy pricing, household usage, seasonal demand, and the challenges consumers face when managing utility costs.

Methodology

We identify relevant news cycles and journalist requests, then **provide timely commentary from Payless Power experts** on electricity prices, energy efficiency, extreme weather, and grid reliability.

Goal

To consistently connect Payless Power and its experts with relevant energy topics, earning trusted media coverage and strengthening the brand's authority across traditional search and LLMs.

Nicole Franco 8:15 AM

Hi Anna, here are those responses. Hopefully, we are not too late; these can be attributed to Brandon Young, CEO of Payless Power

1. It's not as much about energy consumption as about the timing. Additional daylight in the evening will decrease the lighting required while families are awake and active, even though lighting usually represents only a small part of any bill. With heating and cooling, things become interesting. The dark and cold winter mornings with the permanent daylight saving time mean that the furnace will be working even harder prior to sunrise. The additional time of sunlight in the summer makes the house warm later into the evening, putting the air conditioner to work during the time when everyone is actively using energy. People tend to correlate time change and electricity bill. In the recent study, conducted among 1,003 Americans, 12% of respondents said that the daylight saving time increases their electricity bill, and 23% took certain actions to save energy during daylight saving time. As for the benefits for the landscape, additional sunlight allows the homeowner to take care of his/her lawn in the evening rather than to accumulate the chores for the weekend. Additional light helps security-wise as well – though most burglary cases take place during daytime hours, it still makes people's movements visible.

2. Yes. Since most of the buyers look for a house in the evenings, it is more favorable to have a real light than porch lights in order to show the house properly. Landscaping cannot be judged at dusk. The permanent daylight saving time will provide the sellers with an additional hour of light to show the house in winter months when the houses usually photograph and show themselves worse.

3. Start with the thermostat. Make it preheat the house 30-45 minutes prior to your alarm clock, not all night long. Use the gradual sunrise option for the smart lights instead of turning everything on immediately. And don't forget that the actual change takes effort from your body as well. In our survey, 84% of Americans claim it takes at least 1 day to adjust to a new time after the time change, while 29% say it takes at least one week. Making the routine automated can help. And if you use time-of-use pricing from the utility company, schedule dishwasher and the laundry to do the work outside of peak hours, because permanent daylight saving time will change those hours.

Just in case they did a recent report that has a few data points that might also answer a few of your questions if time is crunched:

https://paylesspower.com/blog/how-americans-really-feel-about-daylight-saving-time/

On energy costs:

Nearly 1 in 8 Americans (12%) say daylight saving time increases their electricity bill
23% have taken steps to reduce their energy usage during daylight saving time

On adjusting to the time change:

84% of Americans say it takes at least 1 day to adjust after the clocks change, and 29% say it takes at least one week
Nearly 2 in 5 (39%) admit it takes moderate or significant effort to adjust
2 in 5 say daylight saving time negatively impacts their mood, and 35% say it worsens their mental health
56% have forgotten to adjust their clocks, and 32% have been late or early for something important due to the fall time change

On where Americans stand:

52% dislike daylight saving time
2 in 3 believe it is not relevant in today's world and should be abolished
71% would support a nationwide or global movement to eliminate it
Even so, 53% believe it will still be around 10 years from now
Top reasons Americans think it still exists: tradition (44%), political/legislative gridlock (19%), and business/economic reasons (12%)

Methodology: Survey of 1,003 Americans: 8% baby boomers, 22% Gen X, 53% millennials, 17% Gen Z.

CURATE AND BUILD PARTNERSHIPS WHERE NOW JOURNALISTS REACH OUT TO YOUR ENTITY AS AN ESTABLISHED LEADER IN YOUR SPACE

CASE STUDY: ENTITY-LED PR - COMMENTARY LED

FRACTL

The impact on homeowners

With more daylight in the evening, you'll be less reliant on artificial indoor lighting when you're awake and active. And this could slightly reduce your electricity use.

However, any savings may be offset by increased heating and cooling demands.

"The dark, cold winter mornings that stem from permanent daylight savings would mean that your furnace will need to work harder before sunrise," says **Brandon Young**, CEO of Payless Power in Fort Worth, TX.

In the summer, the additional sunlight can keep your house warmer later into the evening, forcing your air conditioner to run when energy use is the highest.

"As for the landscaping, additional sunlight can allow you to take care of your lawn in the evening rather than wait for the weekend. You might also have to adjust when you water and maintain your lawn," Young explains.

More sunlight can also improve the security of your home as most perpetrators commit their crimes at night when it's dark outside.

Lastly, if you plan to list your home in the future, the extra daylight could help you out.

"Since most buyers look at homes in the evenings, you'll have more opportunities to show your home in the winter months," Young says.

Plus, the natural lighting can provide a better view of your home's exterior, landscape, and overall curb appeal.

Fractl launched this data-driven campaign to investigate how generative AI is influencing users' emotions, relationships, and mental health.

Why Fractl

As a growth marketing agency building AI-powered tools and agentic workflows, Fractl has firsthand experience with both the possibilities and risks of human interaction with AI.

Methodology

We surveyed **1,000 U.S. adults about their relationships with AI chatbots,** including emotional attachment, personal conversations, mental health concerns, and the safeguards they want platforms to introduce.

Goal

To spark a broader conversation about emotional dependence on AI and the responsibility platforms have to create safer, more transparent chatbot experiences.

Today in, "practice what you preach": Fractl's own Newsjacking campaign earned coverage in CNBC, The Observer, Diario AS, YourTango, NBC, Fox News, Newsbreak, MSN, Yahoo, with interest pending from WSJ, NPR, and others.

I worked with my team to run this study ahead of my #BrightonSEO talk, "Mastering AI Prompts to Scale Earned Media."

The topic of our research: AI Psychosis.

Ever heard of it? It's a new term that's close to my heart after our executive team poured their hearts and souls into building Fractl Agents this past year, staying on the bleeding edge of AI in marketing, and seeing the potential risks firsthand.

That's why it was so important to me and Kristin Tynski to spread awareness about this phenomenon, to help marketers, parents, and friends understand just how personal this new interface has become.

What we found was illuminating:

- 54% have had extended (1+ hour) chatbot conversations.
- 22% have formed an emotional connection with a chatbot.
- 29% of GenAI users have shared secrets and deeply personal information with a chatbot.
- 24% say chatbots sometimes understand them better than family or friends.
- 42% worry AI psychosis could affect them or someone close.

As marketers, we spend our days engineering connection, but this research forced us to ask what happens when the platform starts to reshape human connection itself.

If you're building or promoting AI tools, remember: the more human it feels, the greater your responsibility to protect the humans using it.

INITIAL STRATEGY IS DATA-LED BUT YOU CAN TAP INTO THE ULTIMATE ENGINE WITH YOUR SUBJECT MATTER EXPERTS!

CASE STUDY: THE ULTIMATE ENGINE AT WORK

FRACTL

Fractl launched the Ultimate Media Engine in July 2025 to build stronger entities and grow a loyal audience across multiple platforms.

Why Fractl

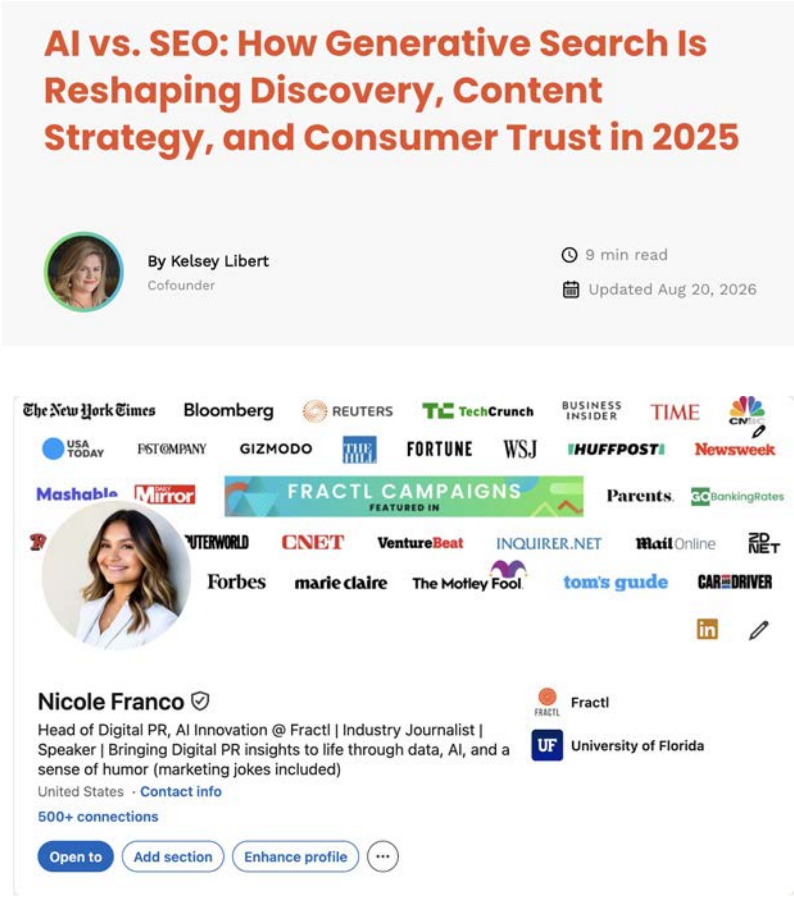

As a growth marketing agency specializing in digital PR and AI innovation, Fractl understands that authority is built through both credible information and genuine human connection.

Methodology

We combine **proprietary data campaigns, expert commentary, podcasts, social media, and AI-powered workflows** to consistently connect Fractl and its experts with the topics we want to own. We continue to test and refine how our entities appear across each platform from both a data-driven and personable perspective.

Goal

To build authority across traditional search and LLMs while creating recognizable experts, stronger audience relationships, and real fans of the Fractl brand.

Entity-based SEO: An explainer for SEOs and content marketers

Written by: Cassie Wilson Clark

According to research from Fractl and Search Engine Land, **66% of consumers** believe AI will replace traditional search within five years, and **82% find AI search more helpful** than traditional SERPs. As **Kelsey Libert**, co-founder at **Fractl**, notes, "This highlights the need for marketers to prioritize GenAI brand visibility over keyword optimization, because keyword strategy is a thing of the past, while knowledge graphs will define your current and future brand visibility."

CONTENT MARKETING INSTITUTE

How To Make Reddit Work for Your Brand's Marketing

Reddit has attracted users to thousands of niche forums for years. Now, it's attracting the attention of traditional and AI search citations and 116 million daily users. Does it have your brand's attention? Here's why it should.

Aditya Sachdeva, head of data journalism at Fractl, explains that Reddit represented a more unfiltered sense of community sentiment regarding the emerging terms, while LinkedIn captured thought leadership on the subject.

Their findings were turned into a report, The New Vocabulary of AI search.

You can also conduct research on Reddit without publishing the results. Learn what your audience is talking about in real time. Are they confused or frustrated by the same problem? What language do they use to describe the problem? What solutions are being proposed? By whom?

Inc.

Your Fully AI-Written Emails Are Making It Weird

Asking the new tech to draft routine correspondence is fine, but leaving it all to the bots could damage your company's reputation.

However, as Nick Santillo, the CEO of Fractl explains, while AI can help with clarity or thought organization, "it never could and never will replace the human element of understanding and interpreting tone and intent." Clients expect to work with humans when they pay for humans and "When a message, regardless of whether it is written by humans, machines, or both, sounds generic and distant, this destroys trust."

The Top Marketing Trends and Technologies for 2026: Marketing's Age of AI Has Arrived, Now Comes the Hard Part

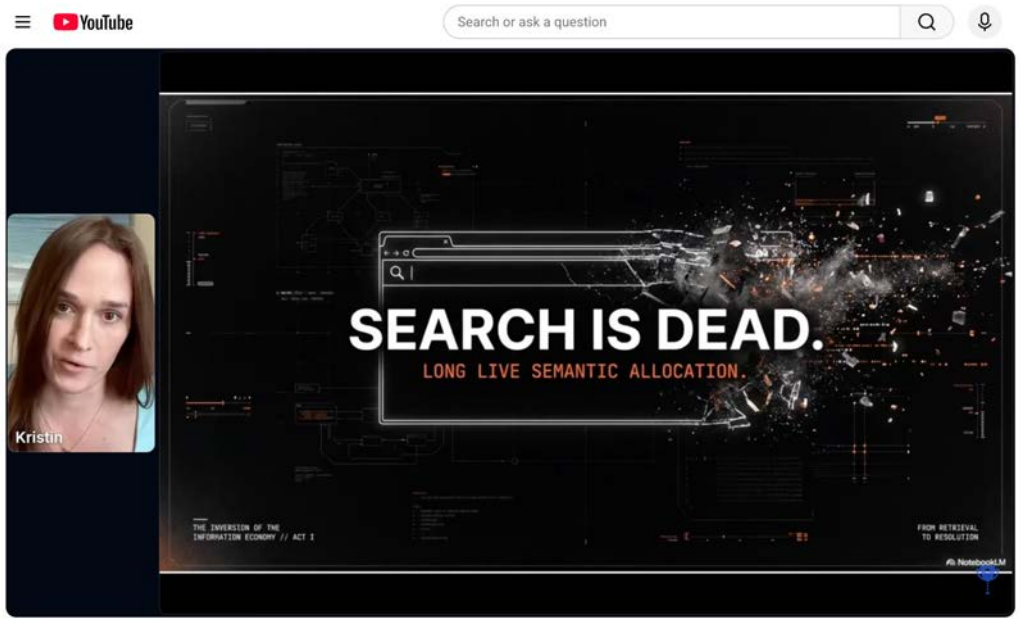

Even though GEO currently represents a small fraction of overall search, it's time for marketers to begin shifting their content approaches. Research from Fractl and Search Engine Land found that 66 percent of consumers expect AI to fully replace traditional search within five years. Younger audiences are already adopting it at a much higher pace; among 18- to 24-year-olds, 66 percent already use ChatGPT to find information, compared to 69 percent who use Google.

AI PROMPTS FOR NEWSWORTHY CONCEPTS

FRACTL

Search for trending news and pitch opportunities in [industry/topic]. Cover: recent **news from the past 24 to 48 hours worth reacting to,** upcoming economic data or reports tied to **this industry, any major events or emergencies relevant to it, TikTok** and short form trends showing pain points or viral moments, legislation or regulatory changes affecting it, what competitors or other experts are being quoted about and where the gaps are, the latest AI or tech news in this space with an uncovered angle, **what journalists want on HARO or Qwoted, a quick survey or data study idea that ties into current coverage,** and a 90 day list of predictable news moments to pre-draft commentary for. Prioritize the most timely and reactive opportunities first.

Here's what's currently trending on TikTok in this space, with a few flagged as sensitive since some of this content skews into risky territory:

#SkinnyTok
A very large trend (520+ million views) built around "what I eat in a day" style posts and extreme thinness content. This has drawn significant expert and media criticism for promoting restrictive eating patterns and disordered behaviors, and it's already generating its own news cycle as platforms and health experts push back on it. This is a strong angle for an expert to comment critically on, specifically around the harm of unregulated, non-professional health content reaching young audiences, since only a small fraction of this content comes from actual health professionals.

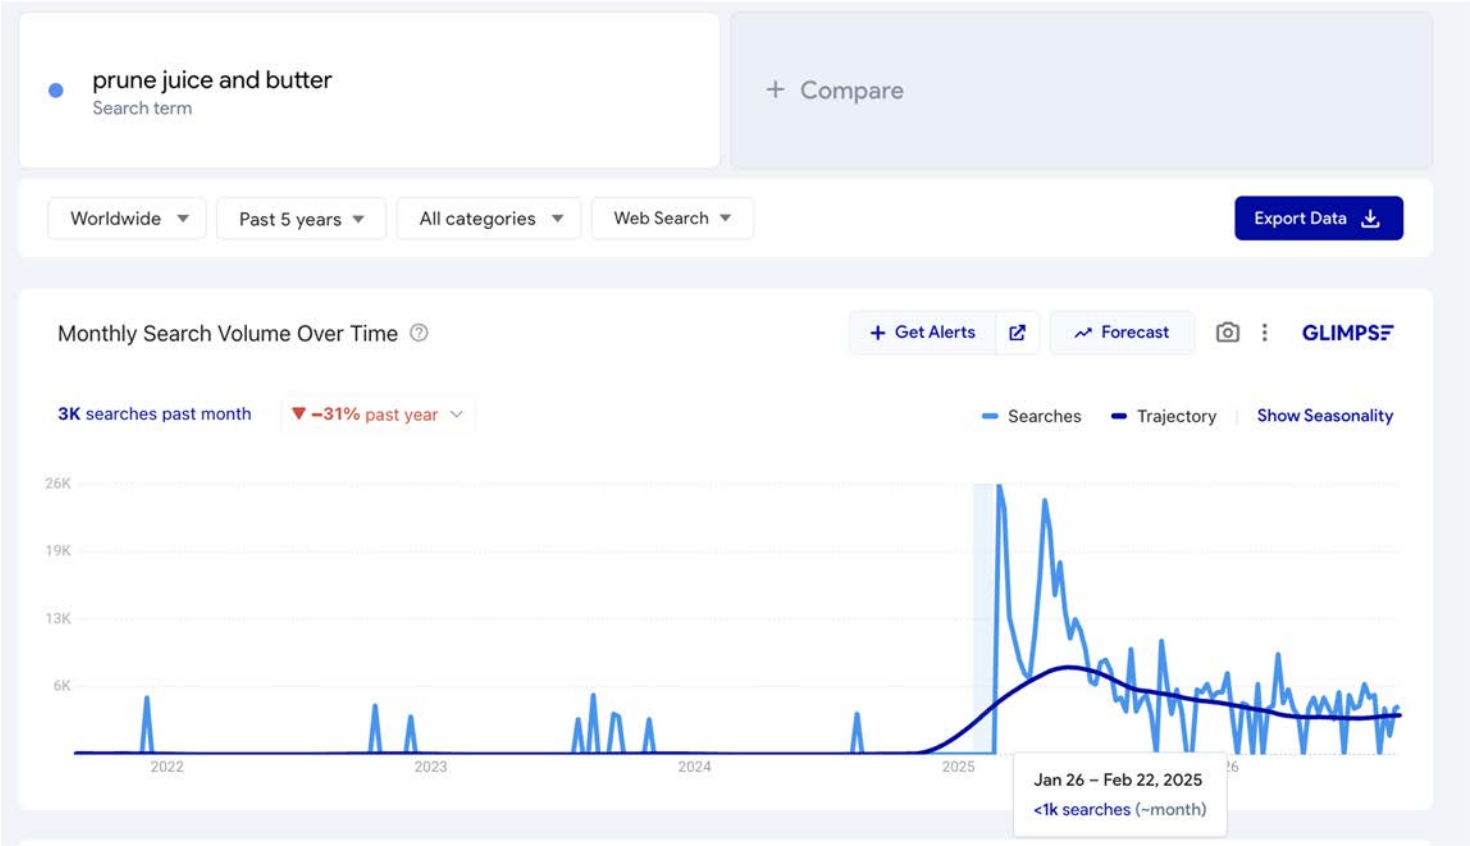

"Oatzempic" challenge
A viral trend involving a specific drink combination with claims of dramatic rapid weight loss, positioned as a natural alternative to GLP-1 drugs. Experts note there's no real evidence behind the claimed mechanism, and it's generating pushback pieces from health journalists debunking it, which makes it a timely "expert fact-check" opportunity.

Protein and fiber-forward content
A more science-adjacent trend around high-protein, high-fiber eating for metabolism and appetite control. This one is less controversial and could be a lower-risk angle if your expert wants to comment on what's actually evidence-based versus hype.

Structured challenge trends
Things like modified versions of extreme fitness challenge formats, dry January-style content, and intermittent fasting posts continue to cycle through, generally framed around discipline and structure rather than quick fixes.

AI PROMPTS FOR NEWSWORTHY CONCEPTS

FRACTL

AI PROMPTS FOR NEWSWORTHY CONCEPTS

FRACTL

- TIMELY
- EMOTIONALLY COMPELLING
- EDUCATIONAL
- ENTERTAINING
- BACKED BY DATA
- SUPPORTED BY SMES

According to Mei, **"The idea that warm prune juice and butter can work as a powerful laxative comes from personal experiences, but there's no strong evidence that combining them makes them more effective and it's certainly not a guaranteed solution for constipation."**

More concerning, **"The trend perpetuates the use of home remedies to manage chronic constipation instead of resolving underlying problems in fiber intake, hydration, or gut motility disorders,"** Mei explains. She adds that repeated use of the mixture may lead to **"diarrhea, gas, or even exacerbate gut imbalances in the long term."**

Even more alarming: **"Some individuals are now using it as an easy fix to shed pounds, confusing water loss for fat loss,"** she says. **"The trend invites the risk of disordered eating behavior, particularly among teenagers and young adults who are more susceptible to viral health misinformation."**

And if you thought the taste might be worth it, think again. Mei doesn't sugarcoat it: **"Warm prune juice is cloyingly syrupy and already sweet, and added melted butter provides a greasy texture that most won't be able to swallow. Don't anticipate a spa-day smoothie!"**

CREATED EXPERT COMMENTARY ON TIKTOK TREND

FRACTL

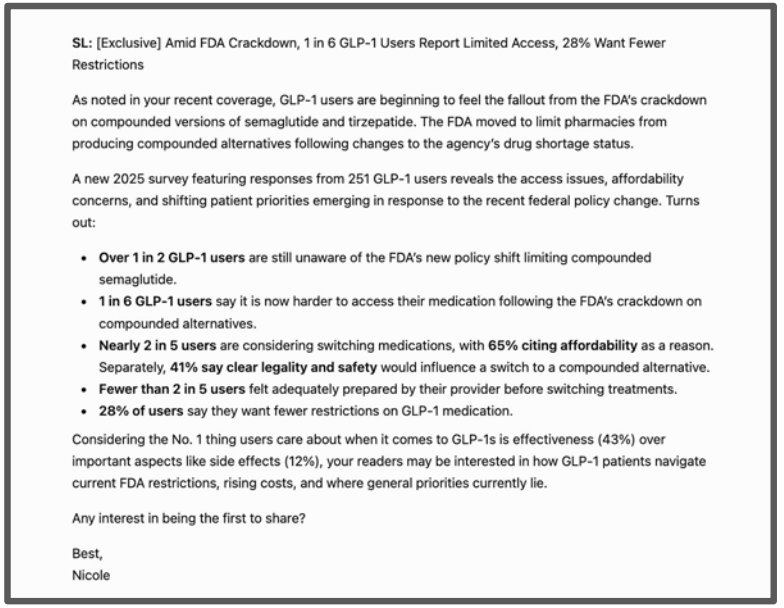

AI PROMPTS FOR NEWSJACKING PITCH

FRACTL

Create a newsjacking pitch **using the example pitch I provide as a guide** for the tone, structure, length, and writing style. Use only the expert commentary I provide and pull out the most surprising, compelling, and newsworthy insights. Do not invent statistics, quotes, claims, or additional expert opinions. **Start with a timely hook explaining why the topic is relevant, introduce the expert with their full attribution, and weave the strongest quotes** throughout the pitch with short transitions for context. **Prioritize commentary that is surprising, useful, controversial, or likely to make a strong headline.** End by explaining why the topic matters to the journalist's readers and offer the expert for additional commentary. Keep the pitch concise, conversational, and journalist-friendly. Do not use em dashes.

Example pitch: [PASTE EXAMPLE]
Expert attribution: [PASTE NAME + CREDENTIALS]
Expert commentary:[PASTE QUOTES]

SL: [Exclusive] Amid FDA Crackdown, 1 in 6 GLP-1 Users Report Limited Access, 28% Want Fewer Restrictions

As noted in your recent coverage, GLP-1 users are beginning to feel the fallout from the FDA's crackdown on compounded versions of semaglutide and tirzepatide. The FDA moved to limit pharmacies from producing compounded alternatives following changes to the agency's drug shortage status.

A new 2025 survey featuring responses from 251 GLP-1 users reveals the access issues, affordability concerns, and shifting patient priorities emerging in response to the recent federal policy change. Turns out:

- **Over 1 in 2 GLP-1 users** are still unaware of the FDA's new policy shift limiting compounded semaglutide.
- **1 in 6 GLP-1 users** say it is now harder to access their medication following the FDA's crackdown on compounded alternatives.
- **Nearly 2 in 5 users** are considering switching medications, with **65% citing affordability** as a reason. Separately, **41% say clear legality and safety** would influence a switch to a compounded alternative.
- **Fewer than 2 in 5 users** felt adequately prepared by their provider before switching treatments.
- **28% of users** say they want fewer restrictions on GLP-1 medication.

Considering the No. 1 thing users care about when it comes to GLP-1s is effectiveness (43%) over important aspects like side effects (12%), your readers may be interested in how GLP-1 patients navigate current FDA restrictions, rising costs, and where general priorities currently lie.

Any interest in being the first to share?

Best,
Nicole

[Study] This Is The Most Stereotypical Food In Every State

Nicole Franco <nicole.franco@frac.tl>
to andrea.romano

Fri, Oct 4, 2019, 1:26 PM

Hi Andrea,

During the fall season, I love everything pumpkin related. I was shocked to see Florida wasn't one of the states that ordered the most pumpkin spice items! We all love our pumpkin spice cheesecake and cookies. Well, I do anyway! Thanks for sharing.

When it comes to state pride, we'll all stand up to defend our signature dish. In a recent study conducted by my team at AreaVibes, we surveyed over 1,000 people about the top associated food and beverage stereotypes for each state.

Here's the No.1 food associated with each state:

- New York - Pizza
- Maine - Lobster
- Michigan - Potato Chips
- Pennslyvania - Philly Cheesesteak
- Lousiana- Crawfish
- Idaho - Potatoes
- Vermont - Maple Syrup
- Hawaii - Pineapples
- Tennesee - Whiskey
- Californa - Oranges

View the full list here: United States of Stereotypes

Your readers might be interested in knowing what foods their state is getting the best, or maybe even worst, reputation for.

Any interest in sharing at Travel + Leisure? I'd be happy to pull more stats from the full study. Let me know your thoughts.

Best,
Nicole Franco
Media Relations Associate | Fractl
Nicole.Franco@frac.tl

THE DIGITAL PR DUPLICATION METHOD AT WORK

FRACTL

Create a media pitch for this campaign using the campaign URL **[INSERT CAMPAIGN URL], the timely hook [INSERT TIMELY HOOK], the target location [INSERT STATE OR CITY], the reference pitch [INSERT REFERENCE PITCH],** and the full campaign data [INSERT FULL DATA]. Mimic the **reference pitch verbatim, including its structure, tone, formatting, and sentence style,** but replace the campaign details, statistics, locations, and timely hook with the correct information from the new campaign. Verify every finding against the full data, do not invent or assume any information, and provide the subject line followed by the complete pitch without using em dashes.

With National Dog Day tomorrow, I've got my dog Hershey extra spoiled this week! We're a dog household through and through, of course, since we're Florida natives (happy to include a photo upon request, I have thousands).

When it comes to pet pride, we'll all stand up for our team, dog or cat. In a recent study conducted by my team at Fractl on behalf of MetLife Pet Insurance, we analyzed a year of Google search activity across all 50 states and 55 major metros to see which way each place leans.

Here's whether each state leans Team Dog or Team Cat:

- New York - Cat
- Maine - Cat
- Michigan - Cat
- Pennsylvania - Cat
- Louisiana - Dog
- Idaho - Cat
- Vermont - Cat
- Hawaii - Cat
- Tennessee - Dog
- California - Cat
- Florida - Dog
- Washington - Cat

View the full list here: The Great Pet Divide

Your readers might be interested in knowing whether their state is Team Dog or Team Cat, and how it stacks up nationally.

Any interest in sharing with your readers at McClatchy Media? I'd be happy to hold the exclusive for your team and pass along the full study. Let me know your thoughts.

Is the U.S. more of a dog-loving or cat-loving country? A report found out

Published: Aug. 29, 2026, 12:00 p.m.

Aw. (Krista Mangulsone via Unsplash) Krista Mangulsone via Unsplash

CREATE ONE AI ENGINE FOR ANY QUERY

FRACTL

We have a great example of this in a recent report we conducted: https://www.frac.tl/the-new-vocabulary-of-ai-search/

Here's a quick explainer from Adi:

"For this research, we utilized social listening across a variety of channels to examine emerging AI-related buzzwords in the SEO industry. Reddit represented a sense of community sentiment regarding the emerging terms, while LinkedIn represented more prominent sentiment from industry leaders and public figures.

Our goal was to get a sense of the overall acceptance of these emerging terms within the larger marketing community. While LinkedIn represented a sense of thought leadership regarding the emerging terms, it was not necessarily indicative of a larger sense of community. Reddit represented a more unfiltered sense of community sentiment regarding the emerging terms. Once we determined that the terms had been consistently discussed over a one-year time period, we then focused in on a more narrow window of time: a three-month time period. During this time, we extracted all instances of the terms across the subreddits in which they were discussed. This allowed us to go beyond anecdotal observation and get a sense of whether or not the emerging AI-related SEO terms were being adopted within the larger community."

Please let me know if this works or if you would be interested in more insight! I've also attached the image of the data set, including the Reddit analysis!

All the best,
Nicole

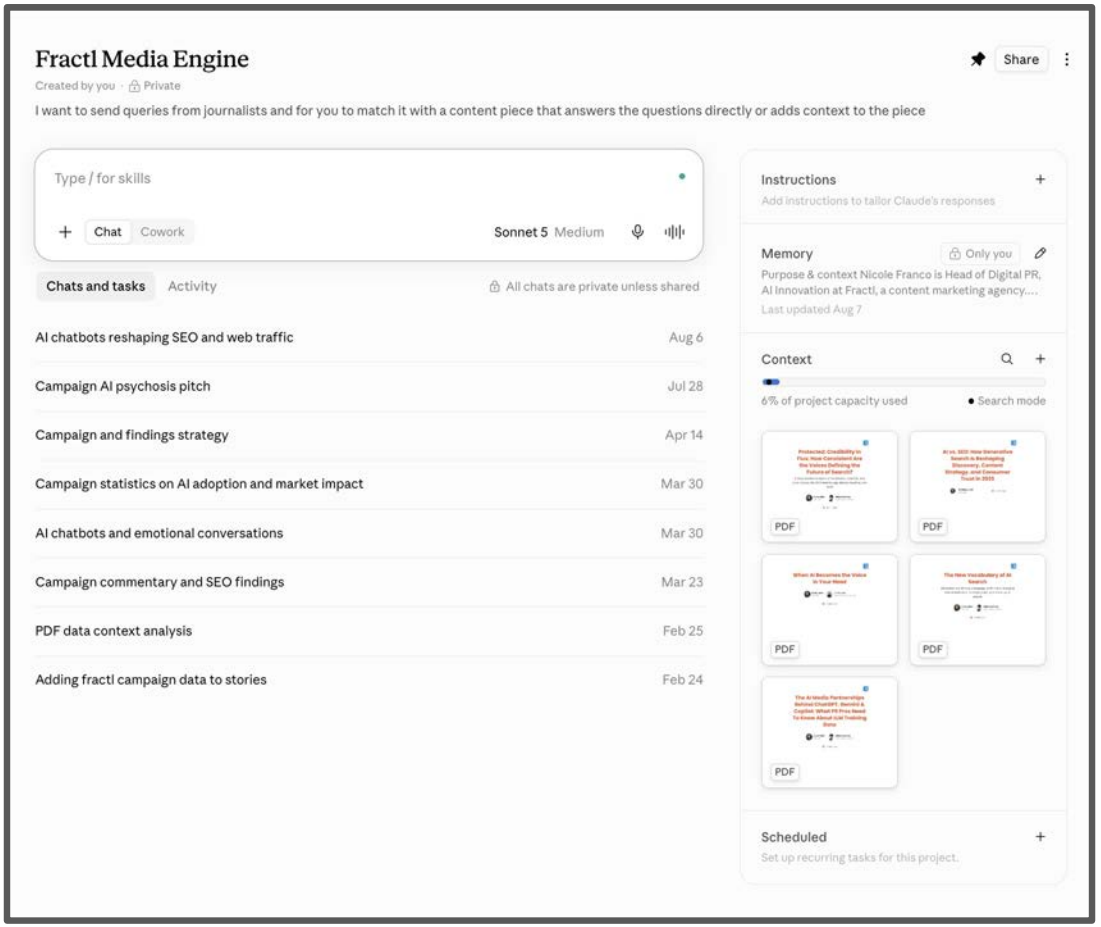

Public-sentiment-of-_New-Era_-marketing-terms-by-platform_2x-2-1536x1288.png

Thanks Nicole - this is helpful.

[CNN Exclusive Report] Inflation increased the average cost of classroom supplies by 12.4% since 2021 External Inbox

Summarize this email

Nicole Franco <nicole.franco@frac.tl>
to parija.bhatnagar

Hi Parija,

Amidst mounting financial pressures caused by

In a recent report, took a closer look
tapping into the BLS inflation calculator, and surveying over 350 teachers, our team shed light on the following financial challenges American teachers are grappling with for the 2023-2024 school year:

- More than 9 in 10 teachers pay for classroom supplies out of their pocket.
- **39% of teachers sacrifice personal necessities or luxuries in order to afford back-to-school classroom supplies:** 50% of Gen Z, 44% of Millennials, and 30% of Gen X teachers would do so
- Less than half (46%) of teachers' back-to-school supplies come from the school itself; 28% come from parents, while 38% come from donations
- **32% of teachers said 25-50% of their school supplies come from their Amazon Wish Lists**
  - **12% reported as much as 50-75% of their supplies coming from Amazon Wish Lists**
- 32% of teachers want the school to pay for AI tools or a ChatGPT Plus account for the 2023-2024 school year.
- Overall, 47% of teachers experience feelings of guilt or inadequacy about not being able to spend more on classroom supplies.

View the full report here.

Considering inflation has increased **the average cost of classroom supplies by 12.4% since 2021,** would you like to share this with your readers? I'd be happy to send you additional quotes or anything you need to help build on the breaking story around back-to-school costs. Are you interested in being the first to cover our exclusive research?

Best,
Nicole
