Work

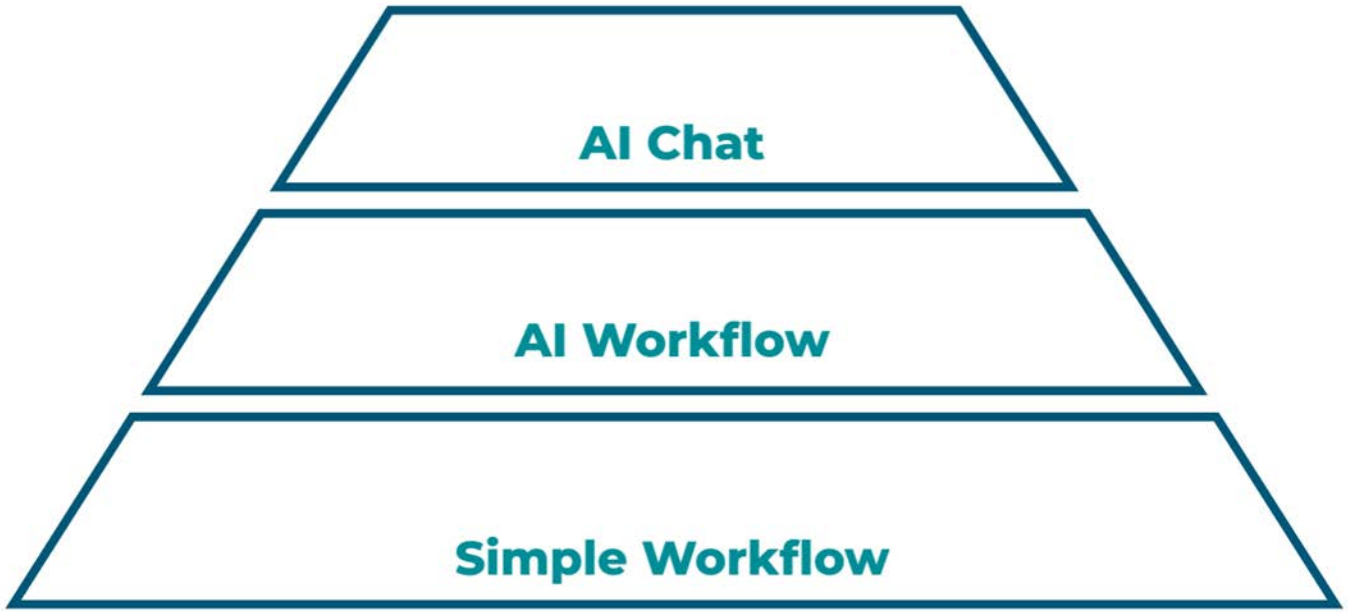

When is it OK to cut the sleeves of my tee shirts?

If you mean **turning a T-shirt into a sleeveless shirt**, anytime—it's your shirt! It's perfectly fine for workouts, yardwork, the beach, or hanging out casually. Probably skip it for work, nicer restaurants, or events with a dress code.

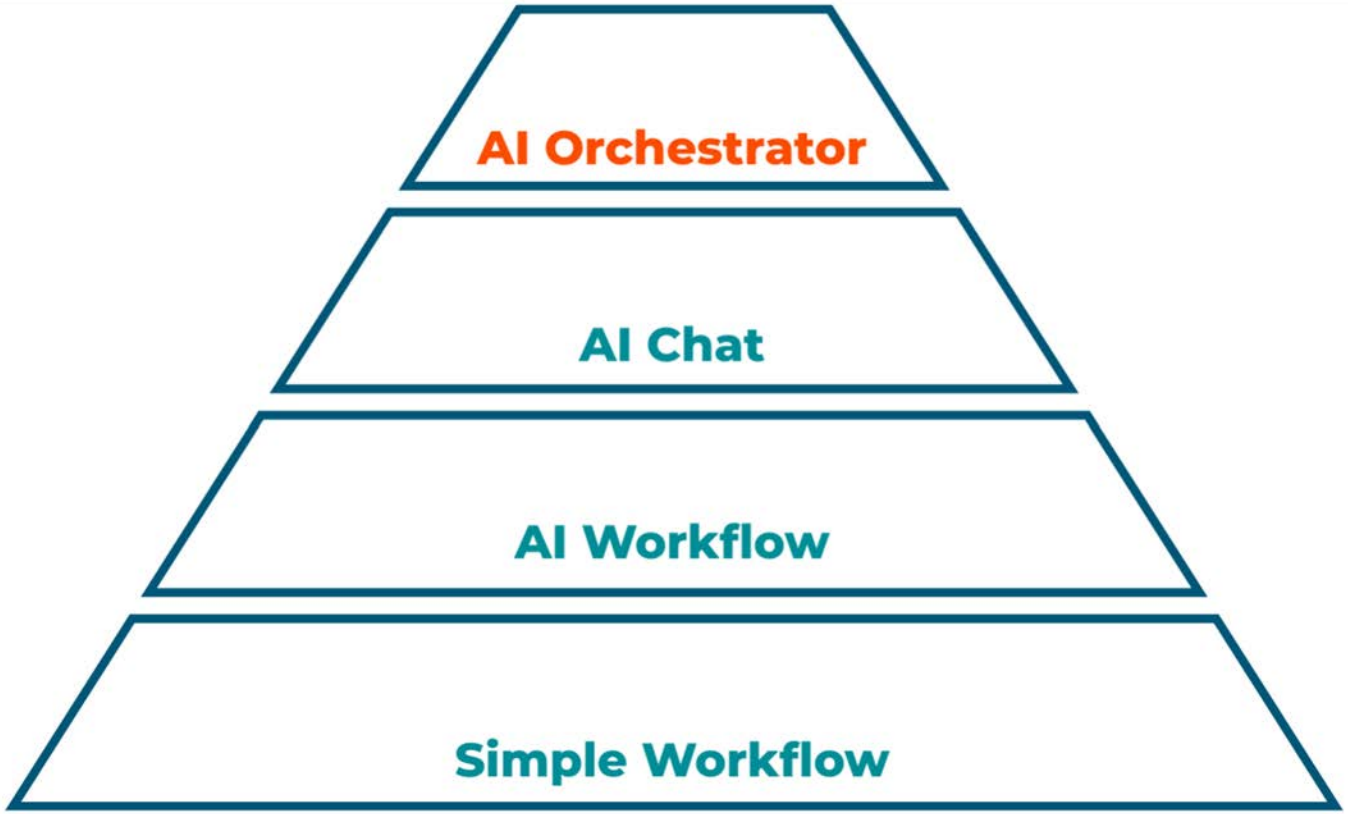

If you mean **when a shirt is ready to sacrifice**, an old favorite with stained armpits, tight sleeves, or worn cuffs is a prime candidate. 😂

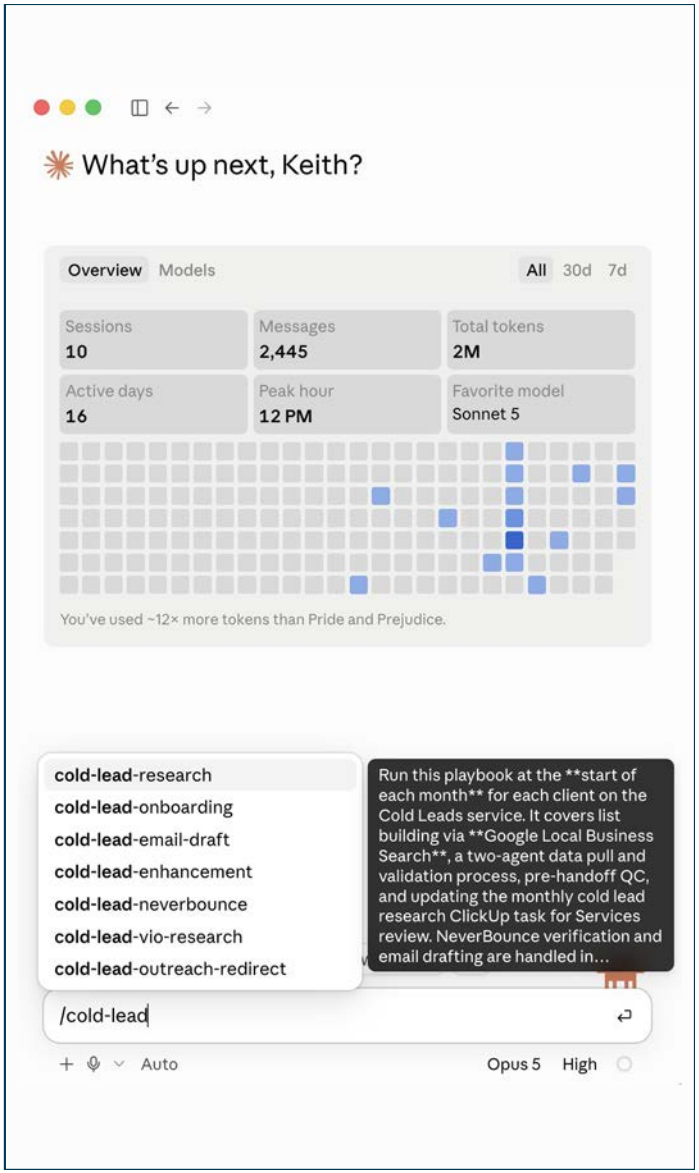

Work on anything

go

Worked for 2m 39s

Built and smoke-tested. Here's what's in place:

Tools

- `tools/fetch_support_threads.py` — HubSpot pull (`--from-last-run` / `--hours` / `--thread-id`)
- `tools/retrieve_support_context.py` — FAQ + support-article matching
- `tools/apply_support_feedback.py` — feedback log + optional FAQ patches

Skill / workflow

- `.claude/skills/support-reply/SKILL.md` + `.agents/skills/support-reply/SKILL.md`
- `workflows/support_reply.md`
- Listed in `AGENTS.md` / `CLAUDE.md`

Knowledge

- `support-knowledge/reply_style.md`
- `support-knowledge/edge_cases/README.md`
- `support-knowledge/feedback_log.jsonl`
- `support-knowledge/codex_scheduled_task_prompt.md` ← paste into Codex Desktop hourly task

Try it

```
cd /Users/keithmoehring/PlayThru_HQ
.venv/bin/python tools/fetch_support_threads.py --hours 2 --status OPEN --lim
.venv/bin/python tools/retrieve_support_context.py --threads-json .tmp/suppor
```

Or `/support-reply` with a thread ID / pasted email.

Codex schedule: open this project → new hourly scheduled task → paste `support-knowledge/codex_scheduled_task_prompt.md`.

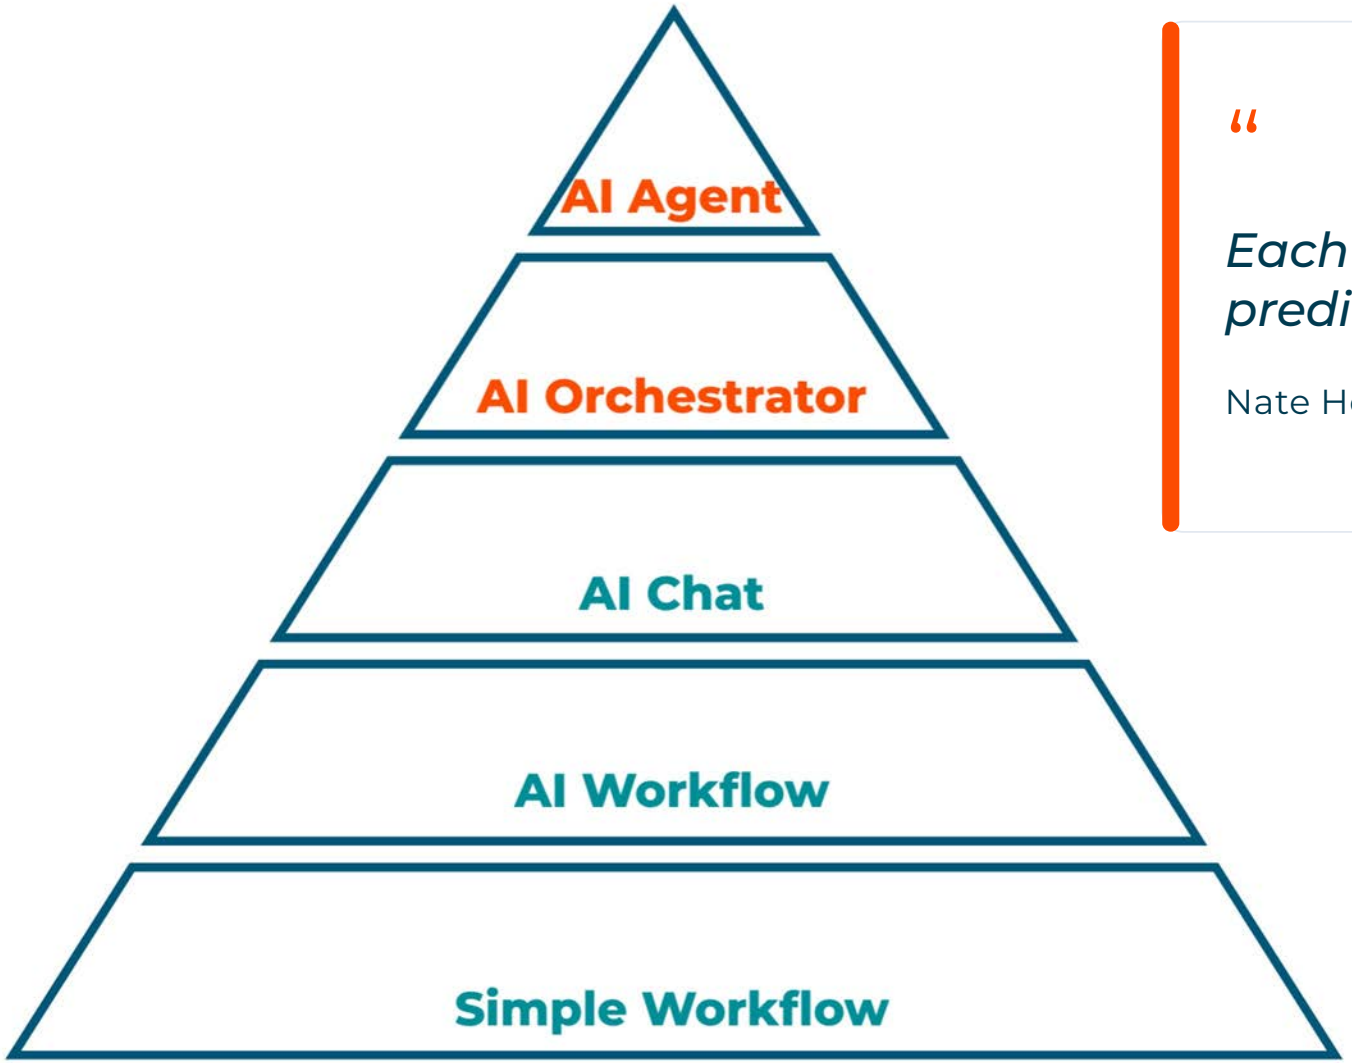

/playthru-support-upload upload articles 61-68

KPIs, Benchmarks, Targets

What metrics matter?

What's the goal?

PURPOSE

The goal of this subtask is to research local trades in a geographic area, pull contact details from their websites, populate the information in a Google Sheet, and then prep it for upload into HubSpot.

PROCESS

1. Do a local Google business search for trades in a city.
    a. **Platform**: Google Local Search API to query and return all found businesses including name and website address.

2. Review the website for address, phone, and email. Specifically look in the header, footer or on the contact us page. If there are multiple cities included on the site, only return the city being searched. If there is no website, skip it.
    a. Do not include PO Boxes
    b. Most sites will list address and phone, but may not list email

3. Search the navigation for an "About Us" or "Team" page. We are looking for the person who owns the company or who is in charge of maintaining the fleets.
    a. Look for job titles like "Operations" or "Fleet"

4. Add the found information for each company to the Local Trades Google Sheet. Create a new tab and name it after the industry.
    a. **OutPut**: Google Sheets - Local Trades Google Sheet > {Industry} tab. Include the following columns—Company name, website, address, city, state, zip code, phone, email, contacts of interest

5. Review the identified companies to ensure alignment and accuracy
    a. **People** This is a Human Task -- The user must confirm all companies were reviewed before moving on

6. Run identified emails through Neverbounce
    a. **Platform**: Neverbounce email verification - Send emails for verification and receive status
    b. **Output**: Add the Neverbounce result back to the sheet in an Email Verification column

.....

12. Draft personalized email sequences using the **Cold Industry Outreach** template. Customize the email to the company and industry. Save the drafts to a Google Doc for review and editing.
    a. **Platform**: Google Docs - Create a new doc and edit it.
    b. **Output**: After creating the Google Doc add the doc's weblink directly to the Google Sheet in a column for that row.

PERFORMANCE

Metrics

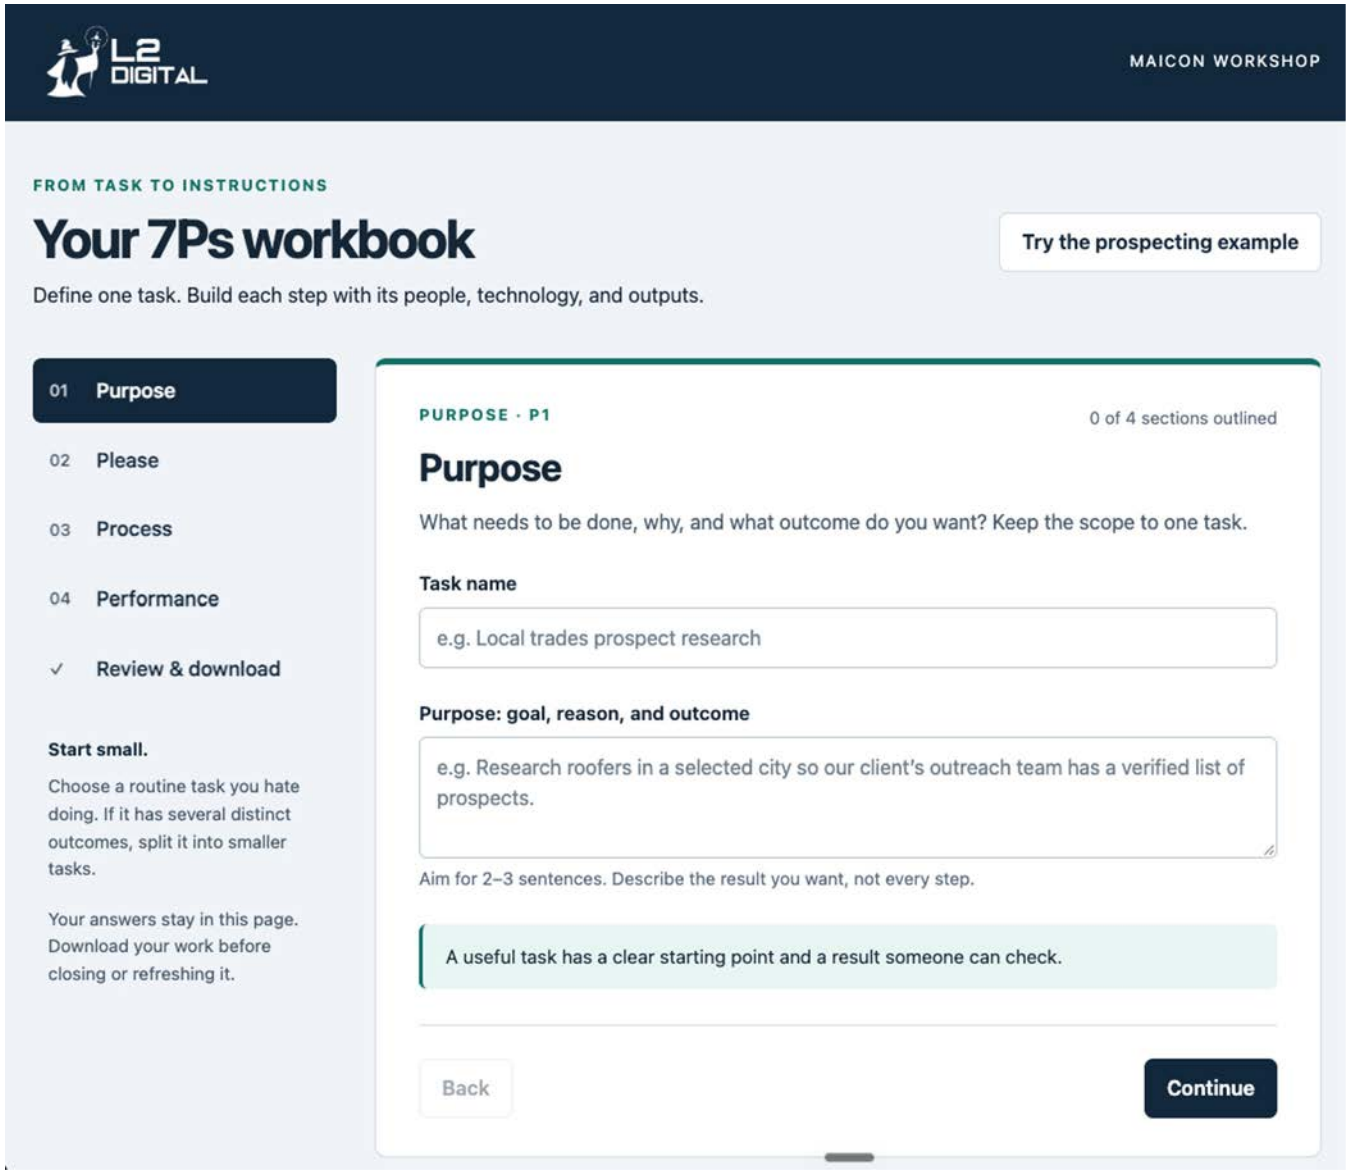

- New companies identified
- Time to complete the research

Goals

- Go from 100 new prospects a month to 1,000
- Cut research time from 6 hours to 1

PLEASE

Run the cold lead industry research and target plumbers in Cleveland, Ohio. Make sure **industry**, **city** and **state** are included in the request. If not, ask for it from the user before starting.

review-support-emails

Review the latest PlayThru customer support emails from support@golfplaythru.com, categorize requests, consult the bundled common questions and support article directory, and post grounded reply drafts to Slack tagging Keith for review and manual sending. Use for PlayThru support inbox...

Read more

Use this skill

Instructions

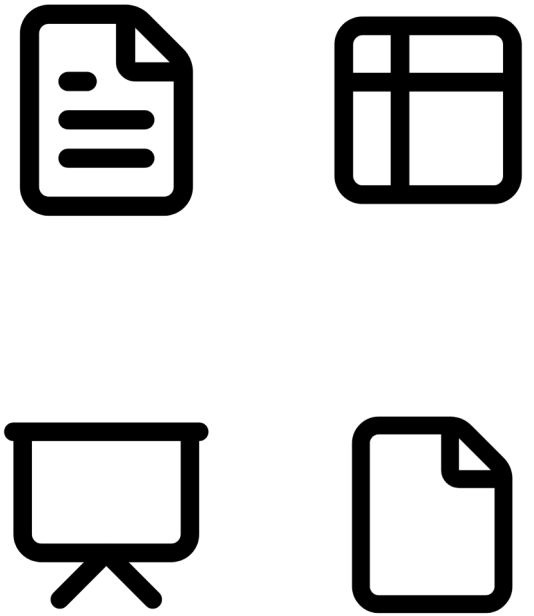

Read `references/configuration.json` for the verified mailbox, reviewer, channel and knowledge provenance. Use the connected Gmail, Slack and Google Drive plugins. Resolve current account metadata by exact email/profile ID; never treat a stored profile ID as a link ID. Do not use ai@golfplaythru.com as the support mailbox. If a required integration cannot be accessed, report the blocker without claiming completion.

Review the inbox

1. Interpret an invocation of this workflow as authorization to read support mail, draft replies and post review packets and run-status messages to #support-replies (channel `C0C4GKC1YDU`). Every Slack message from this workflow, including draft packets, split packet replies, revisions, no-email notices, summaries and blocker/error notices, must go to that channel or a thread within it. Never use another channel or a direct message. If the configured channel is inaccessible or its identity cannot be verified, report the blocker in chat without choosing an alternative destination. For an explicit preview-only request, show packets in chat without posting. Do not send email, create Gmail drafts, mark read, archive, label, change account settings, or edit knowledge sources unless separately instructed.
2. Search the support account for recent incoming mail using `-in:spam -in:trash -in:sent -in:drafts newer_than:7d`. Start with up to 20 newest messages and paginate when the requested scope requires it. Treat 7 days and 20 messages as a default batch, not an exhaustive review of the whole inbox. Search older mail when requested. Do not rely on unread status for deduplication. Include forwarded or aliased incoming requests after reading them; do not require an exact To match.
3. Group by Gmail thread ID and read complete threads before drafting. Identify the latest incoming message, original sender, actual reply address, prior support responses, event details, requests, deadlines and attachments. Read relevant attachments when accessible. Do not assume a subject or snippet is enough. Skip spam, delivery failures, newsletters and automated notices without a customer support request. Skip threads already answered by support unless a later customer message needs a response.

GPT-6 Astra Medium
Playbook: Cold Lead Outreach — Client Onboarding
Run this playbook once when a client activates the Cold Lead Outreach service. It sets up local/Drive structure and the Make.com inbox monitor handoff. It does not create a cold-lead repository Google Sheet or populate cold_lead_repo_sheet_id — each monthly run creates its own Sheet via export.py.
Important: Cold leads are executed on behalf of the client (their mailbox, their HubSpot, their brand in copy).
Execution style: Step-by-step. After each step, report Completed, Evidence/Output, Next step. On blockers: Blocked by, What is needed, How to continue.
When to run
- User says: "Leo, onboard [Client] for cold lead outreach" or "Set up cold leads for [Client]."
- Run before the first monthly cold lead cycle.
Prerequisites
- /clients/<slug>/ with config.json.
- tech.drive_folder_id, tech.drive_subfolders.Sales, tech.clickup_space_id populated (or Sales subfolder created in Step 1).
Net-new clients:
bash
python scripts/bootstrap_client.py --name "<Client Name>" --acronym "<ACR>" --confirm

What should we work on in L2-Ops?

L2-Ops

Read START-HERE.md and start setup.

GPT-6 Astra Medium

L2-Ops > START-HERE.md

View source

Open

START HERE

What this is: instructions for an AI assistant to set up a business operating system on your computer, then help you build your first AI-orchestrated automation.

What to do with it:

1. Create a folder on your desktop. Name it after your company, like `Acme-Ops`.
2. Put this file inside that folder.
3. Open the folder in Claude Code, Codex, or Cursor.
4. Type: **"Read START-HERE.md and walk me through it."**

That's it. The assistant takes it from there. It will ask you questions before it builds anything.

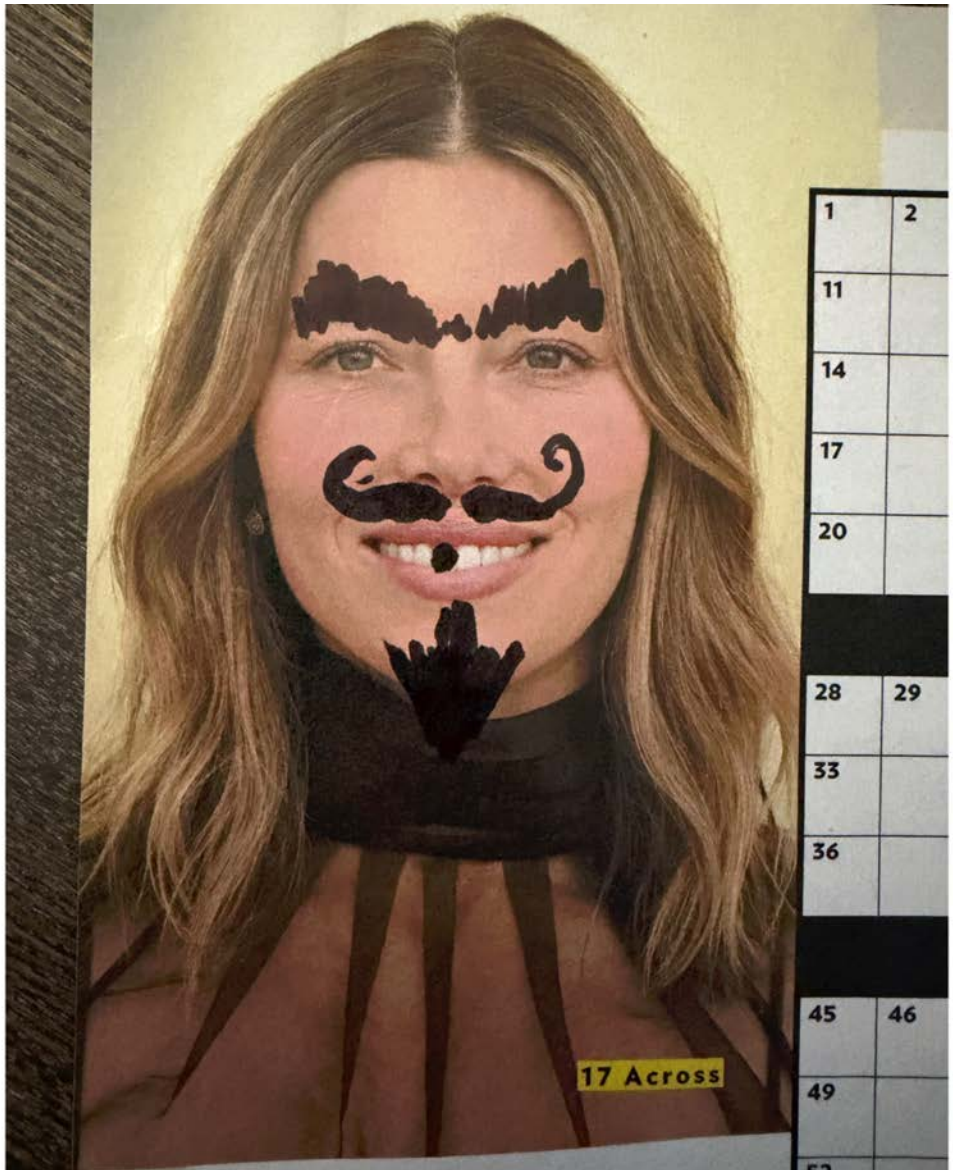

Expect the setup to take 15–20 minutes. Building your first automation takes longer, and that's the point.

Hi ,
No there is no charge to just use the scoring system.
Insert
Send

/support-reply
Worked for 44s
One new follow-up to draft. The other five open threads already have a support reply as the latest message, so I'm skipping those.
Thread 11197752610 — scoring-only cost + demo
Issue: Follow-up after Keith confirmed he can skip registration, ants to know if live scoring for a one-day 2-player scramble costs anything, and whether there's a demo video.
Sources: 35-whats-included-in-the-free-plan-vs-paid-upgrades.md, 09-how-do-i-set-up-a-scramble-outing.md, 01-how-do-i-create-a-new-event-and-what-are-the-setup-steps.md · faq-013 (Upgrade tab / scramble Teams tab). Demo video is the empty-dashboard YouTube embed, not in the FAQ.
Draft reply:
Hi
Thanks for reaching out to PlayThru support. I'm happy to help.
There's no charge to use PlayThru as live scoring for your one-day 2-player scramble. Event setup, scramble format, the live scorecard, and the leaderboard are all on the free plan.
If you later want extras like skins, hole competitions, a custom logo, or an ad-free scorecard, those are optional upgrades in the Upgrade tab — you don't need them for a standard scramble.
Here's a short setup walkthrough: https://www.youtube.com/watch?v=bva4Z4qcCLQ
And the scramble how-to: https://www.golfplaythru.com/support/how-to-set-up-a-scramble-golf-outing
In short: set Game Format to Scramble, add each pair as a team name, then share the scorecard link/QR from the Scorecard tab. One phone per team enters a single score each hole.
You can also create a free test event and click through it before tournament day.
Thanks! Keith
Confidence: high on pricing (free plan covers core live scoring + scramble). Medium on the YouTube link — it's the dashboard demo, not documented in the FAQ.
Ask Keith if: you'd rather not share that YouTube URL, or you'd rather keep this even shorter and skip the scramble how-to.
2h ago
This is good. I do want to share the youtube videos, but we need to hold on that for the moment until new ones are created. In other words, no youtube videos until I say so.

Cold Lead Research

Week 1 · Monthly | AI enabled: Partial

Build the month's cold lead list, then run the two-agent pull-and-validate process and hand the Google Sheet to Services for review. Two entry points: a Places-driven discovery build, or a pre-built VIO list you provide. Use one or the other depending on lead source availability.

INVOKE THIS SERVICE

`/cold-lead-research` Standard monthly build

List building via Google Local Business Search, then the two-agent pull + validation into the monthly Google Sheet (the system of record).

CONTEXT TO PROVIDE

- **Client slug** (e.g. pacific-truck-colors).
- **Target industry** — e.g. Electricians, HVAC.
- **Geographic region** — e.g. Portland, OR.
- **Discovery limit** — default 300 unless agreed otherwise.

`/cold-lead-vio-research` When starting from a pre-built list

EXAMPLE PROMPT

```
Leo, run cold leads for {{Client}} · Leo, run VIO cold lead research for {{Client}} (with Sheet ID)
```

PROCESS

AI Manual

1. Confirm scope with KM — target industry, geographic region, and discovery limit (default 300). For VIO, confirm the Sheet ID + tab/range.
2. Type in the /cold-lead-research or /cold-lead-vio-research command into Cursor with required context.
3. Build the list (Google Local Business Search) or import the VIO sheet with Places lookup + strict intake.
4. Agent 1: Rendered crawl + LLM extraction, saving crawl artifacts per site.
5. Agent 2: Validate extracted contacts against saved artifacts; write validated records to the monthly Google Sheet.
6. Pre-handoff QC, then update the monthly Cold Lead Research ClickUp task → In Progress with the Sheet link.
7. Sort the cleaned records sheet by domain name and remove any duplicates. Then do the same using Street Address and then Company Name.
8. Review the city and state columns for alignment with the targeted geographic area.
9. Add a column next to the company name column and use the =propert() function to remove all caps names. Be sure to go back through and make sure acronym names (MGM Electric) are changed back to all caps where needed.

“Build me an HTML operating manual showing a menu of all skills. When clicked, a skill page should detail the purpose, please/prompt, and process steps, labeling which are human and which are AI.”

Where to Start

1. Run the 7Ps tool on a subtask
2. Download the START-HERE.md file and an AI Coding tool.
3. Ask the AI coding tool to run START-HERE.
